

# DBM-SI Structural Octagon

Digital Brain Model — Structural Intelligence Framework

Eight structural components forming a coverage model for intelligence systems under the Minimal Evolution Threshold (MET) principle.

**Structural Components:** Localization · Metric Distance · CCC · Alignment Dispatching · Rules Engines · ACLM · IR · APTGOE

DBM-COT (Chain of Thoughts) is the conceptual architecture layer of the Digital Brain Model (DBM), focusing on structural intelligence, alignment mechanisms, and evolution-aware system design.
